PROFILE SUMMARY

DevOps & Cloud Engineer | 3.8 Year's Experience

AWS • GCP • Kubernetes (EKS/GKE) • Terraform • Docker • CI/CD • DevSecOps

Results-driven DevOps & Cloud Engineer with 3.8 years of experience designing, automating, and managing scalable cloud infrastructure and CI/CD pipelines in AWS and GCP environments. Expertise in Kubernetes (EKS/GKE), GCP, Terraform, Docker, Jenkins, Linux, GitOps, DevSecOps, Monitoring, and Infrastructure Automation. Proven track record of reducing deployment time, improving infrastructure reliability, optimizing cloud costs, and implementing secure DevOps practices for production-grade applications.

TECHNICAL SKILLS

Kubernetes	Terraform	Docker	Jenkins	CloudWatch	Helm	Prometheus
AWS	GCP	AzureDevOps	SonarQube	CI/CD	Grafana	DevSecOps
EKS	GKE	SRE	CostOptimization			

PROFESSIONAL EXPERIENCE

Newgen Technomate - DevOps Engineer

Oct-2022 – Present | Pune

Kubernetes & GCP Containerization

- Containerized and deployed 100+ microservices using Docker and Kubernetes (EKS/GKE) across AWS and GCP environments.
- Developed reusable Helm charts for multi-environment deployments, reducing deployment effort by 40%.
- Implemented HPA and optimized Kubernetes resource utilization, cutting infrastructure overhead by 25%.

CI/CD Automation & DevSecOps

- Designed end-to-end Jenkins CI/CD pipelines, scaling deployments from weekly to multiple per day.
- Integrated SonarQube into CI pipelines for automated code quality and vulnerability scanning.
- Automated Docker image builds and Kubernetes deployments via Jenkins and GitHub with Git branching workflows.

Cloud Infrastructure & Terraform

- Provisioned highly available AWS infrastructure using Terraform modules with multi-environment support (dev/staging/prod).
- Configured VPC architecture including subnets, NAT Gateway, security groups, and VPC peering.
- Optimized AWS costs by 15% through EC2 right-sizing and S3 lifecycle policies.
- Designed GCP infrastructure using GKE, Cloud Run, Cloud SQL, and Pub/Sub for scalable, event-driven production workloads.

Monitoring, Logging & Reliability

- Implemented centralized monitoring using Prometheus, Grafana, and CloudWatch with automated alerting.
- Reduced MTTR by 30% through proactive monitoring, health checks, and automated incident response.

Security & Best Practices

- Enforced IAM least-privilege policies, Kubernetes RBAC, SSL certificate management, and secrets handling.
- Embedded DevSecOps best practices across CI/CD pipelines and cloud infrastructure.

CERTIFICATIONS & EDUCATION

- Master of Management Studies**, Mumbai University, 2018
- Bachelor of Computer Applications**, Dr. Babasaheb Ambedkar Marathwada University, 2014
